

# DateTime Module

The project requires the data and time. Use the datetime module, examples of which are below.

```
from datetime import datetime

# Example 1: Current Date and Time
current_datetime = datetime.now()
formatted_datetime = current_datetime.strftime("%Y-%m-%d %H:%M:%S")
print("Example 1:", formatted_datetime)

# Example 2: Date Only
current_date = datetime.now().strftime("%Y-%m-%d")
print("Example 2:", current_date)

# Example 3: Time Only
current_time = datetime.now().strftime("%H:%M:%S")
print("Example 3:", current_time)

# Example 4: Custom Format
custom_format = datetime.now().strftime("%A, %B %d, %Y %I:%M%p")
print("Example 4:", custom_format)
```
